

## Parts List

# Aluminum Rectangular Folding Table

Model 90096

Please read the following instructions carefully and check all the parts before setting up your table.

- 1 – leg assembly
- 1 – table top
- 1 – bag containing four connectors and four screws
- 4 – table top connecting poles

## Instructions

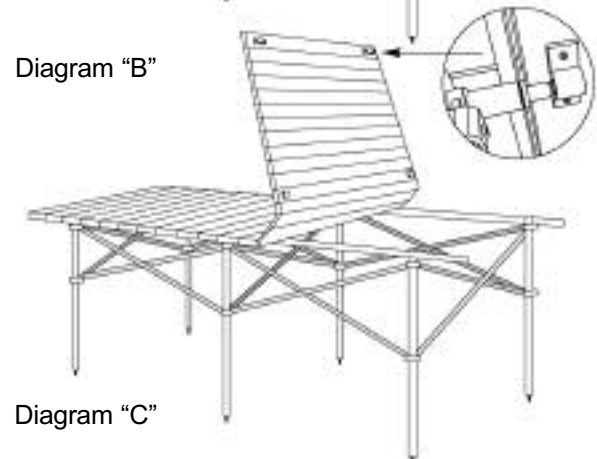

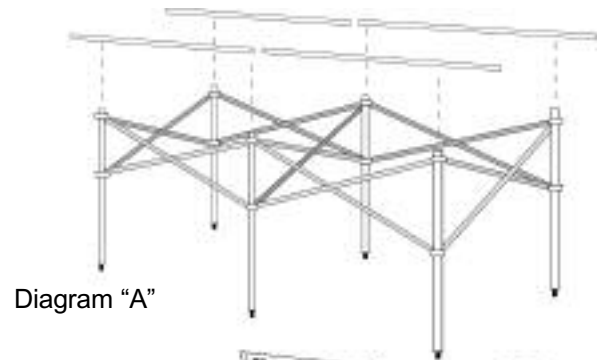

- 1 Remove the Rectangular Folding Table from the storage bag and set the table top aside.
- 2 Open the table legs by slowly pulling the legs away from each other, allowing the support brackets to slide up the legs of the table until they stop at the top. Attach the table top connecting poles (see diagram "A").

- 3 Unroll the table top and place it on a flat surface with the nylon connectors facing up. Be careful to not over stretch the elastic bands between the aluminum slats.

Four of the connectors are already in place. The remaining four connectors must be installed with a screwdriver in the pre-drilled holes located around the outside of the table top. The four connectors and screws are located in a plastic bag that came with the table. Do not over tighten the screws (see diagram "B").

- 4 Lay the table top across the crossbeam support on the table top legs and snap the connectors to catch the crossbeam. Stretch the table top a bit and insert the four buttons of the support crossbeam into the four round receivers located at the four corners of the table top (see diagram "C").

- 5 To dismantle, reverse the above procedure.
